College of Engineering and Physical Sciences

April, 20th, 2022

Hello,

My name is Cyndee Gruden, and I am the Dean of the College of Engineering and Physical Sciences at the University of New Hampshire.

I would like to welcome you to the 2022 Interdisciplinary Science and Engineering Symposium also known as the ISE. The ISE is part of UNH's annual undergraduate research conference one of the largest and most diverse conferences of its kind in the nation. The undergraduate research conference showcases student academic excellence in every discipline and major at UNH.

Now in our 19th year, the ISE Symposium features research from hundreds of UNH students who are focused on integrating science, engineering and mathematics perspectives in their work. UNH's tradition of student-focused learning is exemplified in the broad array of undergraduate research opportunities that we offer to our students. The ISE gives students the chance to gain professional experience and essential skills through presenting their research in this public forum.

This year's ISE symposium will be held in-person on April 20th in the Hamel Rec Center. The program will feature students presenting their research through posters, demonstrations, and oral presentations from a multitude of disciplines, many interdisciplinary, including earth, environmental, biological, computer and physical sciences, civil, mechanical, electrical and computer engineering, mathematics and statistics, physics, and chemistry.

Please join us here as we celebrate the scholarly achievements of our remarkable students.

Cyndee Gruden,
Dean of the College of Engineering and Physical Sciences
University of New Hampshire
