The Interdisciplinary Science and Engineering Symposium (ISE) is part of UNH's annual undergraduate research conference. It is one of the largest and most diverse conferences of its kind in the nation. The ISE showcases and celebrates the innovative research that our undergraduate students pursue and the academic excellence that they achieve as they create solutions to real-world challenges. Guided by our renowned faculty mentors, our students develop important life skills in problem solving, project management and teamwork – qualities that will serve them well as they graduate and pursue successful careers.

Now in our 21st year, the ISE Symposium will be held on April 24th in the Whittemore Center Arena. The program will feature over 400 students presenting their research to judges, faculty, attendees, and peers through posters, demonstrations, and oral presentations from a multitude of disciplines, many interdisciplinary, including earth, environmental, biological, computer and physical sciences, civil, ocean, mechanical, electrical and computer engineering, mathematics and statistics, physics, and chemistry.

Please join us here as we celebrate the scholarly achievements of our remarkable students.

Cyndee Gruden,
Dean of the College of Engineering and Physical Sciences
