## Abstract

The opportunity to utilize drones to carry out inspections over large areas, with minimal requirement for roof access can reduce tasks which would otherwise take days to complete, down to a matter of hours. Key gains include reductions in time, cost and allowance for provisions. Whilst acquiring pictures, videos and 3D models to continuously monitor changing conditions over extended periods.

## Interviews

Peter Kalaitzidis  
 Easy Aerial Inc.

"Drones are amazing, but what drones do is replace the human eyes... not the skill of the human".

Sargeant Eric Bourn  
 UNH Patrol Sergeant & County Drone Unit

"People often lack the technical knowhow to protect their buildings against subtle issues associated with snow".

## Summary

Based on the findings, it would be possible for a startup business to sustain growth whilst offering snow-roof services and to secure a net profit upwards of \$30,000 per season, by the third season of operators. Our recommendation is that these services be considered by an existing roof inspection business. This is because the services could be an addition to their revenue stream which exists during the warmer months of the year. The snow load business would also benefit by utilizing an existing network of clients to maximize profits.

## Service Strategy

BASIC INSPECTION	PREMIUM MEASUREMENT	PREMIUM+ LICENCED ENGINEER FEEDBACK
\$0.05 /ft <sup>2</sup>	\$0.15 /ft <sup>2</sup>	\$0.20 /ft <sup>2</sup>
